

V9 series - Storage Viewer function

V9 series now supports “Storage Viewer” function which allows you to manipulate storage media as below:

- Copy, move, or delete files between the storage media
- Check the connection status or capacity of the storage media

Copy, move, or delete files between the storage media

You can easily copy, move or delete the files **by simply selecting target files from the storage viewer screen on the V9.**

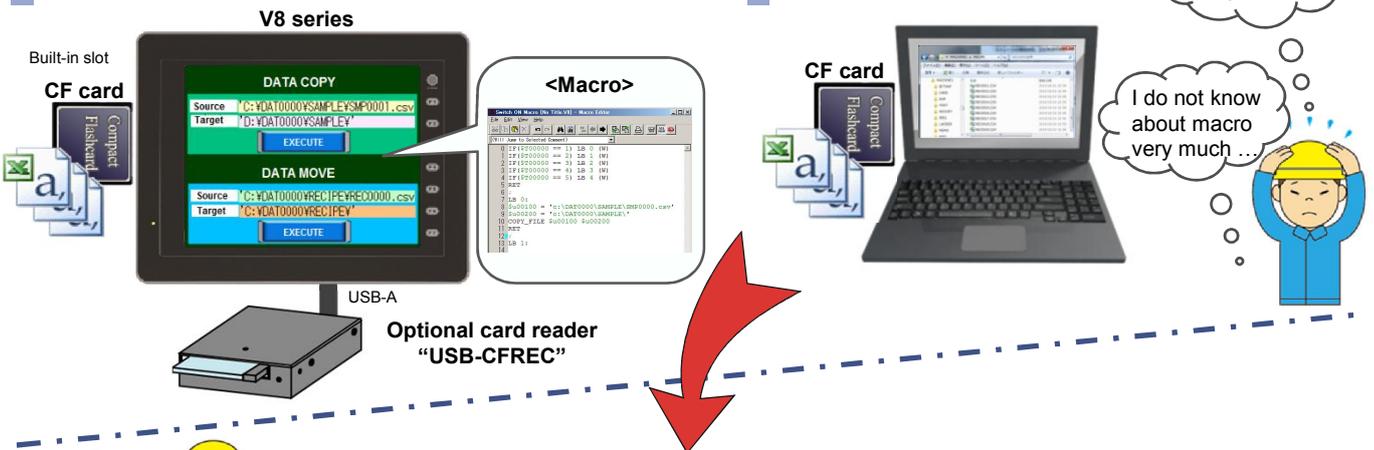

BEFORE

You needed to code macro to copy or move the files.
To delete the files, a PC was needed to retrieve data before deleting them.

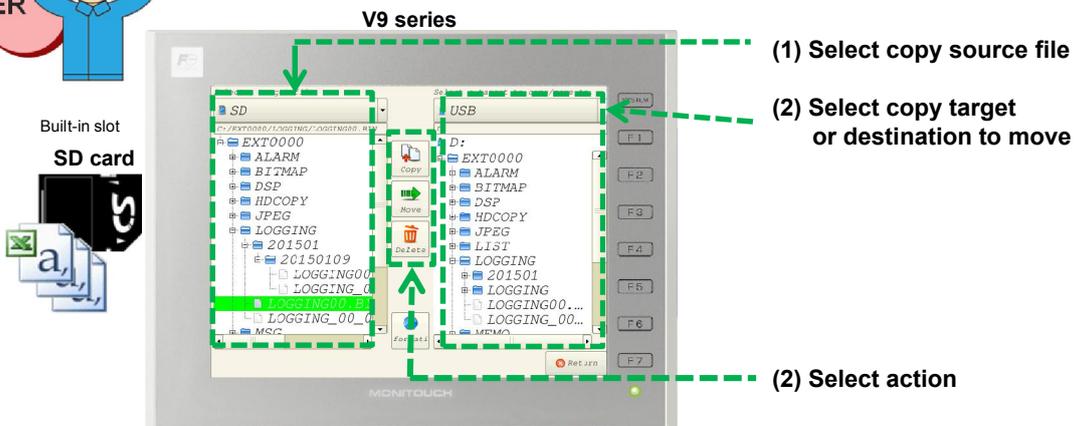

Copy or move

Delete

AFTER

From “Storage Viewer”, simply select files and action!

**No macro or screen edit is required.
Intuitive and simple operation is possible!**

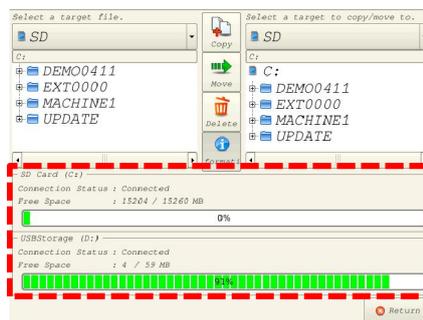

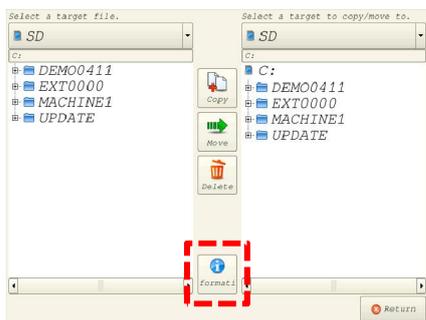

Check the connection status or capacity of the storage media

You can see the connection status and the storage capacity of SD card or other storage medium on USB-A port, **without creating dedicated screen.** Storage viewer can be displayed **on any screen.**

[Procedure]

(1) Press [Information] on the Storage Viewer.

(2) Status of the storage is shown on the bottom of the screen.

**You can reduce man-hour to develop a screen program!
 This information is visible from any screen.**

Applications

Purpose	Details
Backup of logging/alarm	To save backup files, it is possible to copy the data such as alarm history or production information from an SD card to a PC via a USB memory without removing the SD card from V9. Saving the data on your PC helps you to create daily/weekly reports.
Update recipe files in the storage	Save recipe files created on a PC to a USB memory and insert it to V9 to copy the data from the USB to an SD card. You can update the files easily without removing the media.
