FE Fuji Electric

MONITOUCH EXPRESS

Issue No. 114 (December 2018)

[Useful Tips]
V9's local screens contribute a lot to the operational efficiency!

Before

I wanted to change the communication parameters during work on site, but I could not do so because I did not have a PC or peripherals at that time…

It would be much easier if I could change the settings on the V9 instead using a PC…
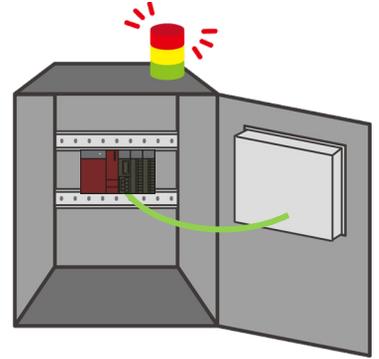

If you use V9, you can change settings from the local screen!

After

V9 local screens allow you to change the settings such as the communication parameters or the IP address, etc.

<When making changes>

[Changeable settings]

- LAN Setting
- E-Mail Setting
- Comm. Setting
- System Setting
  (buzzer & backlight)
- User Settings（security etc.)
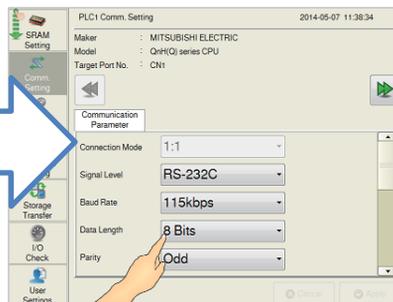

Changes made on the V9 retain even after power off. Changes are saved in a setting file (Ini file) instead of overwriting to the screen program. (See the reverse side.)

<When restoring the settings>
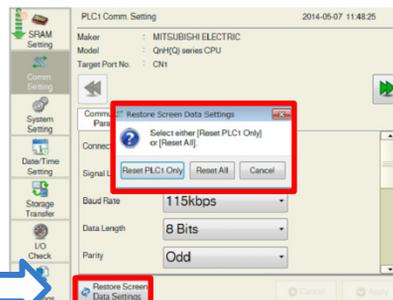

Simply press a button to restore the settings to the ones configured in the screen program.

We can cut hours for work because we can modify setting immediately!

GOOD!

Hakko Electronics Co., Ltd.

About the Ini file

Ini file: It is a file which saves the changes made in the V9's local screen.
(Extension: *.bin)
- It is independent from the screen program file.
- Settings saved in the Ini file has priority over the one configured
in the screen program.

How to save the Ini file:

Start V-SFT-6.
Go to [Transfer] > [Upload] and select "IniFile" from [Transfer data]. Click [PC<-] to upload a file and save it.

Saved Ini file is downloadable from
[Transfer] > [Download] and select "IniFile" from [Transfer data].
Click [PC->] to download.

It is advisable that you backup the Ini file for future repair or replacement.

You can save the Ini file from the V9 to the storage media by using [Storage Transfer] menu in the local screen.

How to clear the Ini file:

What if the settings made on the V9 local screen remain even after downloading new screen program? Comm error with a PLC may occur…

You can clear the settings made on the local screen when downloading a screen program.
Try [Clear IniFile] option.

Start V-SFT-6. Go to [Transfer] > [Download] and select "Screen Data" from [Transfer data]. Click [Option] and check [Clear IniFile]. Click OK to close the window.
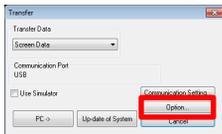

Start screen transfer by clicking [PC->].
The following message is prompted. Click [Yes] to proceed.

It is very convenient for replacement because I can save and clear the settings!

* After clearing the Ini file, V9 local screens are displayed in English.
 Adjust the display language setting accordingly from [Language Setting].
