

[Suggestion for operational improvement]

V9 sends an E-mail with attachments for quick problem-solving!

Before

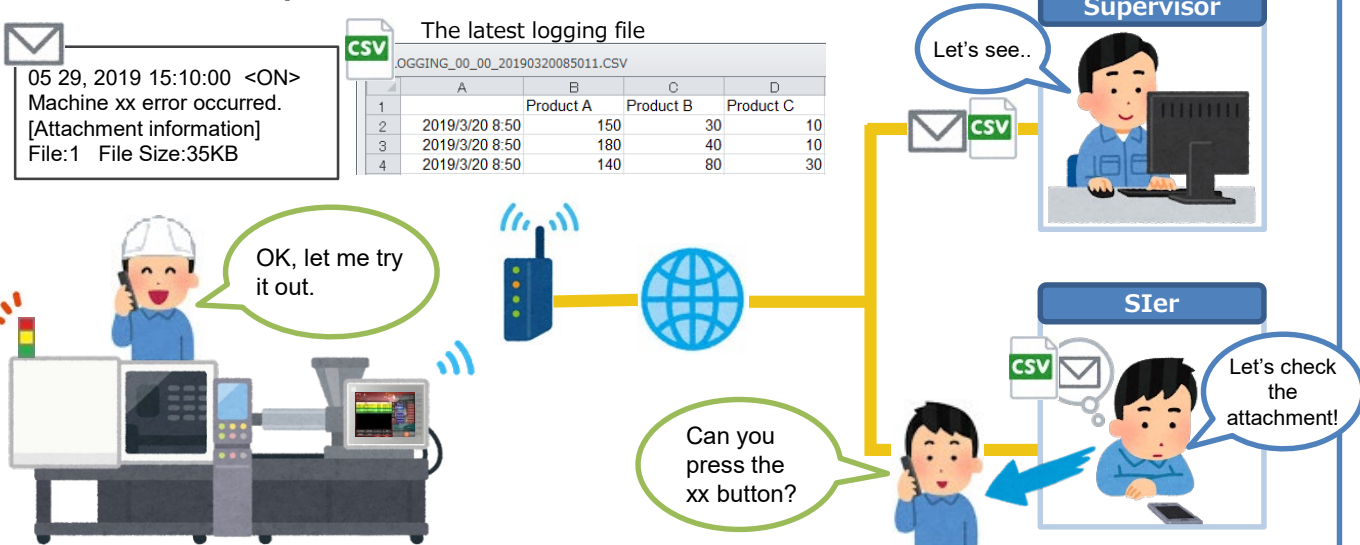

The V9 sends an E-mail to the people involved upon occurrence of the failure. But the message "Error XXX" is too simple to understand.

Get a little creative with the V9's E-Mail transmission function!

After

A file in the V9's storage media can be attached to an E-mail! Information to analyze can be viewed at your office so you can save the trip to the site.

See reverse for details.

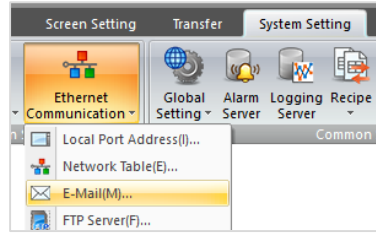

Configuration of Settings

1. E-Mail settings

(when using it for the first time)

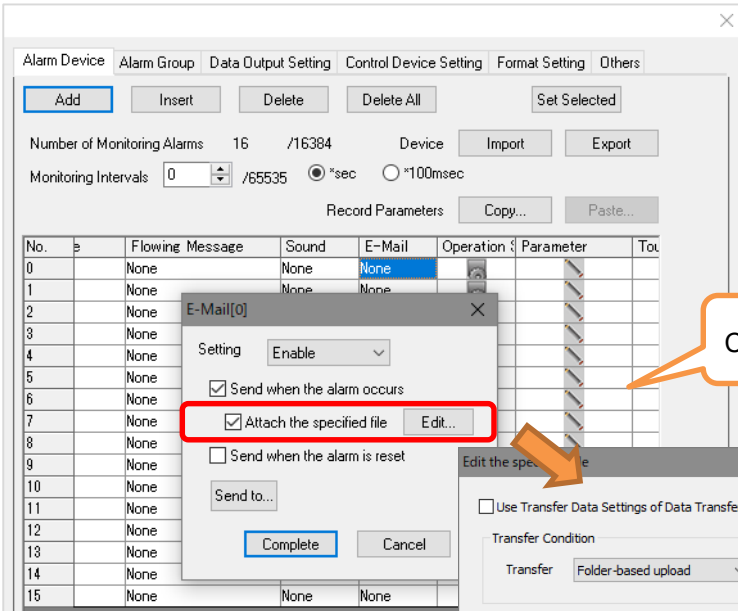

[System Setting] > [Ethernet Communication]
 > [E-Mail]

*For more details, please refer to
 V9 Reference Manual 2.

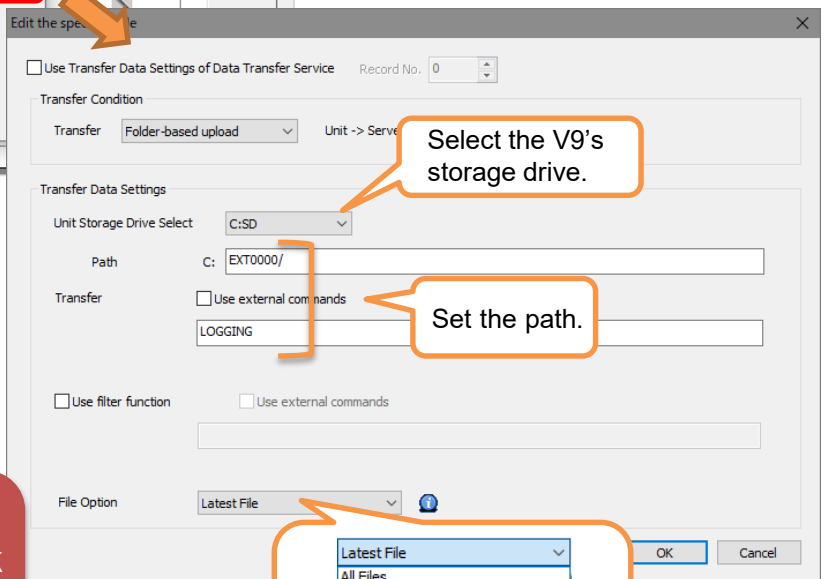

2. E-Mail settings in Alarm Block (v-SFT Ver. 6.0.32.0 or later)

[System Setting] > [Alarm Block No. x] > [Alarm Device] tab > [E-Mail: Enable]
 > Check [Attach the specified file]

* Attaching a file is available only for
 the occurrence of an alarm.

Click the [Edit] button.

Select the V9's
 storage drive.

Set the path.

* All the files with the same
 timestamp will be attached.

I can reduce my working
 hours because I can check
 the status of the problem
 remotely!
