

[Application Example] Check Image Files on the V9 Series! - Image Processing Unit -

Before

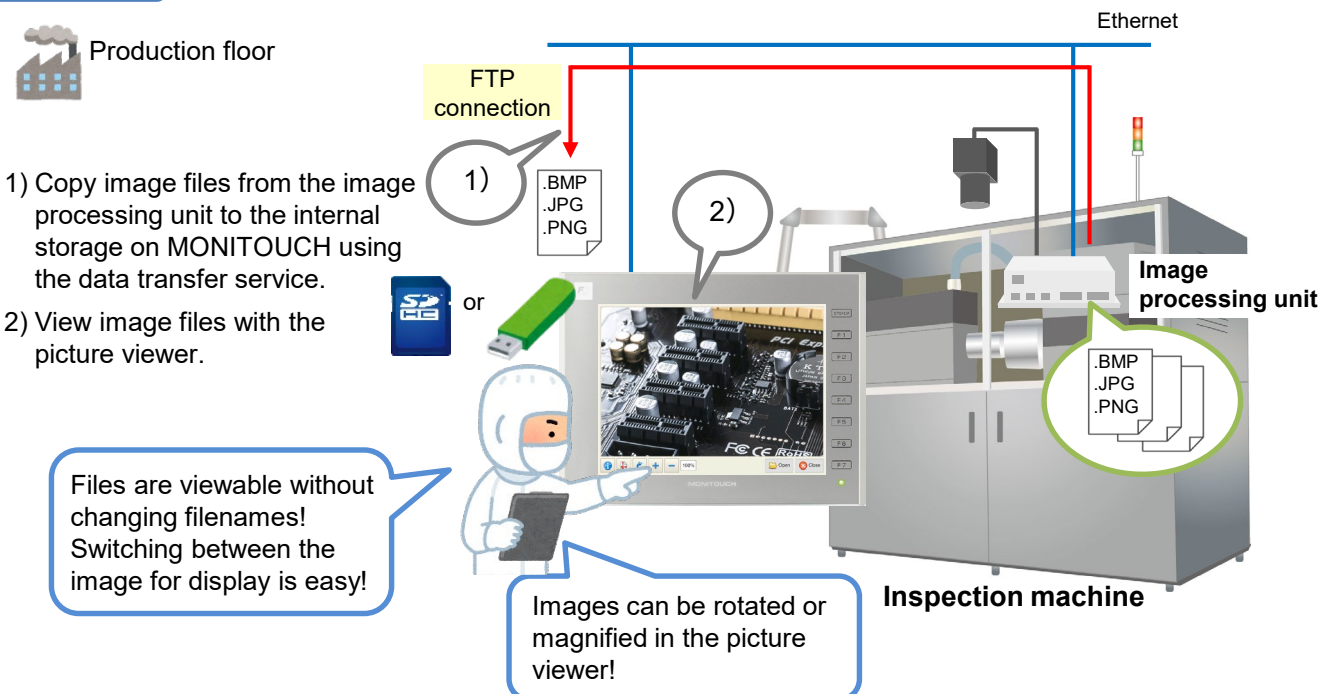

Files saved on the image processing unit can only be checked by returning to the office...

Use the data transfer service (FTP client) and picture viewer!

After

Image files can be checked on the V9 series!

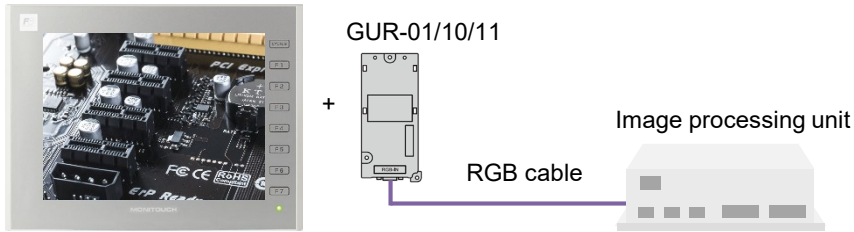

Other convenient usages!

* For details, refer to V9 Series Reference Manual 2.

■ **Display video from the image processing unit using RGB input!**

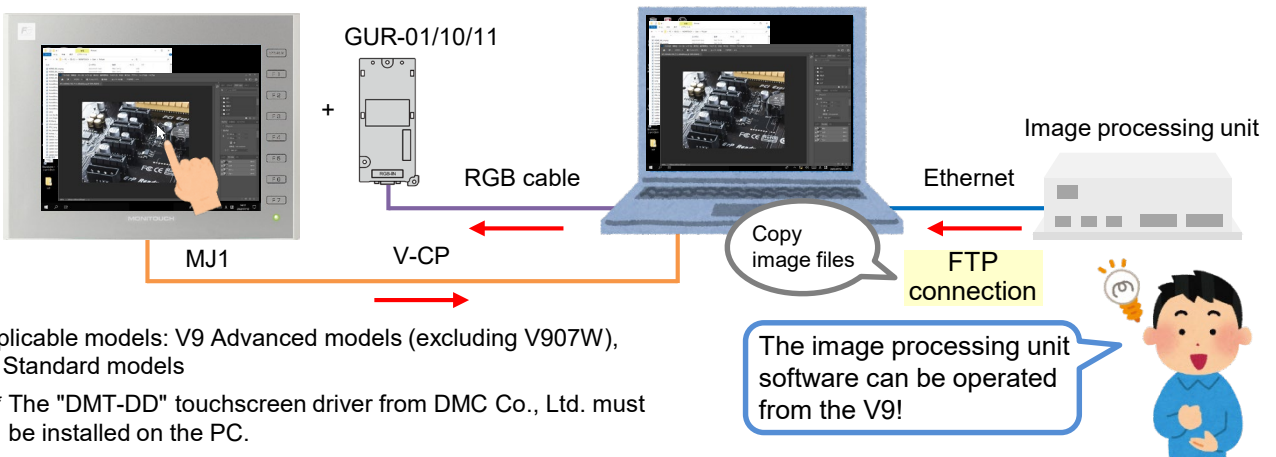

Video from the image processing unit can be displayed in real time on the V9 series by installing an optional unit.

Applicable models: V9 Advanced models (excluding V907W), V9 Standard models

■ **Check image files on a PC using RGB input + touch switch emulation!**

The PC screen can be displayed on the V9 series by installing an optional unit. Image files on the PC can be selected and displayed with touch operations from the V9 series.*

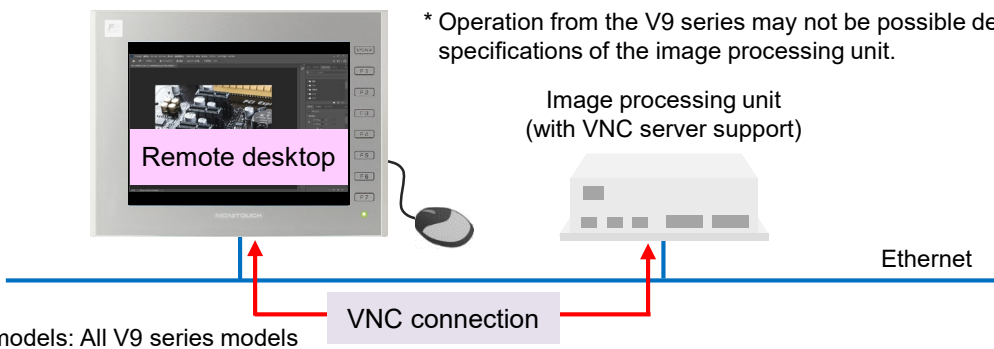

Applicable models: V9 Advanced models (excluding V907W), V9 Standard models

* The "DMT-DD" touchscreen driver from DMC Co., Ltd. must be installed on the PC.

■ **Check video on the image processing unit using remote desktop!**

If the image processing unit has VNC server support, image processing unit operation* and screen display is possible from the V9 series. Since an Ethernet connection is used, this solution is viable even when the image processing unit and V9 series unit are far apart.

* Operation from the V9 series may not be possible depending on the specifications of the image processing unit.

Applicable models: All V9 series models
