

Proposal for Replacement with V10 Series

GD, V4, V6, V7, and V8 series (excluding V808CH) have already been discontinued, and repair services for these models have also been ended. Considering future maintenance, we recommend that legacy series MONITOUCH users replace them with the V10 series.

Replacement models by series

*The V10 series with a black case is also available.

Hakko will assist you with the replacement and screen data conversion!!
Please feel free to contact us regarding model selection, replacement procedures,
software to use, screen data conversion procedures, or any other inquiries.

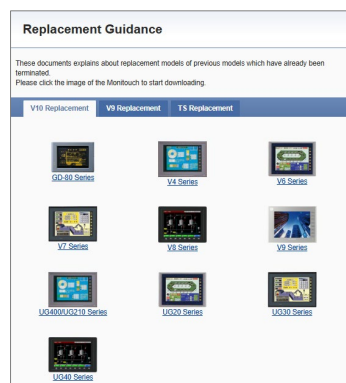

Replacement guide

Replacement guide is available on our website, detailing the replacement for the V10 series. It describes in detail for each model, including panel cutout, communication interfaces and power supply types before and after replacement. Please make use of them during your replacement.

General replacement process

1. Check the existing unit model and connection configuration

Key point

When replacing with V10 series units, optional accessories may be required. It is important to **check the existing unit model and connection configuration!**

Whether optional accessories are used, and which port is used to connect to the equipment, are also important information!

2. Select the V10 series unit to replace and required optional accessories

3. Check the version of your configuration software and transfer cable

Key point

When loading screen data from existing models, older configuration software or transfer cables may be required. It is necessary to **check whether there are screen data and whether older configuration software or transfer cables are available.**

When replacing V6 through V9 with the V10 series, the panel cutout size is the same!

4. Purchase items required for replacement

5. Convert the existing screen data to V10 format

Configuration Software: V-SFT Ver. 6 or Smart Editor is used to convert screen data from legacy models to the V10 series format.

The procedure for converting screen data is also available in the replacement guide.

6. Transfer the screen data to V10 unit and check the operation

* We also provide the "V10/V9 Series File Conversion Manual", which summarizes notes for the replacement.
